

Urine collection and transportation instructions

Handling Instructions: If the liquid preservative is spilled or splashed on the skin, wash the affected area immediately with soap and water. This kit must not be used for collection and must be disposed. Open a new UrNCollect kit for collection.

Prior to Urine Collection

Base

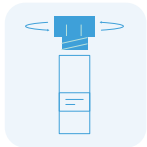

Step 1:

Physician must conduct modified-DRE immediately prior to urine collection. Perform three strokes per lobe as shown in figure.

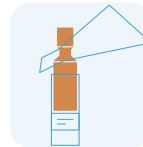

Step 2:

Remove the UrNCollect funnel (funnel) and UrNCollect tube (tube) from the transport kit.

Step 3:

Unscrew cap from tube and store cap thread side up. Do not throw away the cap, this will be used in Step 8.

Step 4:

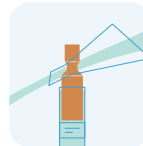

Firmly screw the funnel on the tube, keeping upright to prevent spilling the liquid preservative.

Urine Collection

Step 5:

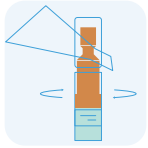

Instruct patient to point the spout towards the toilet and begin urinating into the funnel.

Step 6:

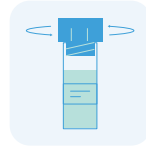

Patient should continue urinating until bladder is emptied. Once the tube is full, excess urine will flow from spout into the toilet.

Preparation for Shipment

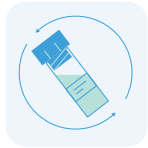

Step 7:

Keeping the tube upright to prevent spilling, unscrew funnel from tube. Dispose of funnel.

Step 8:

Firmly screw cap onto tube until closed. There should not be a gap between the cap and the top of the tube.

Step 9:

Gently invert tube five times to mix the contents.

Step 10:

Place (2) forms of patient ID on each barcode label. Place (1) barcode label on tube. Place (1) barcode label on Test Requisition Form.

Step 11:

Insert tube and absorbent sheet into the biohazard safety bag.

Step 12:

Place the biohazard safety bag, Test Requisition Form, and any required paper attachments inside the kit and close lid securely.

Transportation Instructions

Step 13:

Insert the kit into the FedEx Clinical Pak that is labeled with a FedEx Express Return Priority Overnight Label and seal.

Schedule a FedEx Express Pick Up:
[mdxhealth.com/fedex](https://www.mdxhealth.com/fedex) | 800-GO-FEDEX (800-463-3339)

Note: If unable to ship on the same day of collection, maintain at room temperature (do not expose to extreme temperatures) and ship immediately the following business day. Specimen must be received by mdxhealth within 5 days of collection.
